Case Study:
Manufacturer

Clients:
Coca Cola Enterprises

Location:
London

Project dates:
2008 to present

Setting the Standards in Contractor Management

With a large number of contractors working at its manufacturing site in London, CCE implemented leading software technology to ensure health & safety compliance, secure its people and premises, reduce its exposure to litigation risk and to better control costs.

Background

Coca-Cola Enterprises (CCE) is the largest bottler and distributor of Coca Cola Company products in the world. Its site in Edmonton, London, manufactures and primarily distributes drinks throughout London and the South East of England. Due to the unique nature of some products they also distribute nationally and produce a small amount for export. There are around 250 people working at the site producing 50 million cases of drinks per year.

Challenges

Around 120 contractors work onsite at Edmonton each week carrying out activities ranging from air conditioning, plant and equipment maintenance through to IT support and verifying food standards. This represents high expenditure as well as high risk for CCE in terms of managing security, complying with health & safety regulations and controlling quality. Site management recognised that it needed to manage its contractors more effectively in order to protect the site from exposure to undue risk.

Solution

Working closely with CCE, Access IT Data developed Semietta Contractor Manager to enable the Edmonton site to register, approve, monitor, control and review its contractors.

It set up a password-controlled application allowing specified users to upload job requirements and assign unique job codes, register contractors against rigorous, pre-defined criteria, and book pre-approved contractors.

Once a booking is made, the contractor is automatically emailed the job details and site information. Fully integrated with Semietta Visitor Manager, Edmonton's security desk is now prepared when contractors arrive. Identification passes are automatically created with photo identification added, required Permits to Work are printed ready for signature, and the designated internal contacts are notified.

Users provide ongoing updates about job progress and contractor performance and download operational and financial reports as well as roll call in the event of an emergency.

Key Results

- Real time data on who is on site
- Ease of payments for time worked
- Real time accreditation – Every worker is checked
- Complete on-site records for Roll Call, with an automatic email feature to key staff or fire Marshalls
- Proper control of out of hours worked, such as lone workers
- No spreadsheets!

Facts and figures

- Approximately 3,200 staff accommodated
- Multiple types of access cards used
- 98 Door readers across 3 separate locations
- Can be set up from one log in point to 000's

Why AccessIT Data?

- Self-registration: a tablet in reception can allow visitors to self-register and log in, printing out their own pass
- Contractors can be managed within the cloud system, and key data such as induction dates and insurance coverage, can be confirmed
- Can integrate into room booking systems
- For high risk sites, you can carry out background checks on contractors, staff etc.
- Key control feature for managing the issue of keys and valuable items
- RemoteKey for 'instant keys' for remote doors, or occasional access areas.
- Can be extended to include all controlled doors for a single solution
- Professional approach for managing visitors – use of tablet on arrival, email to host

About AccessIT Data

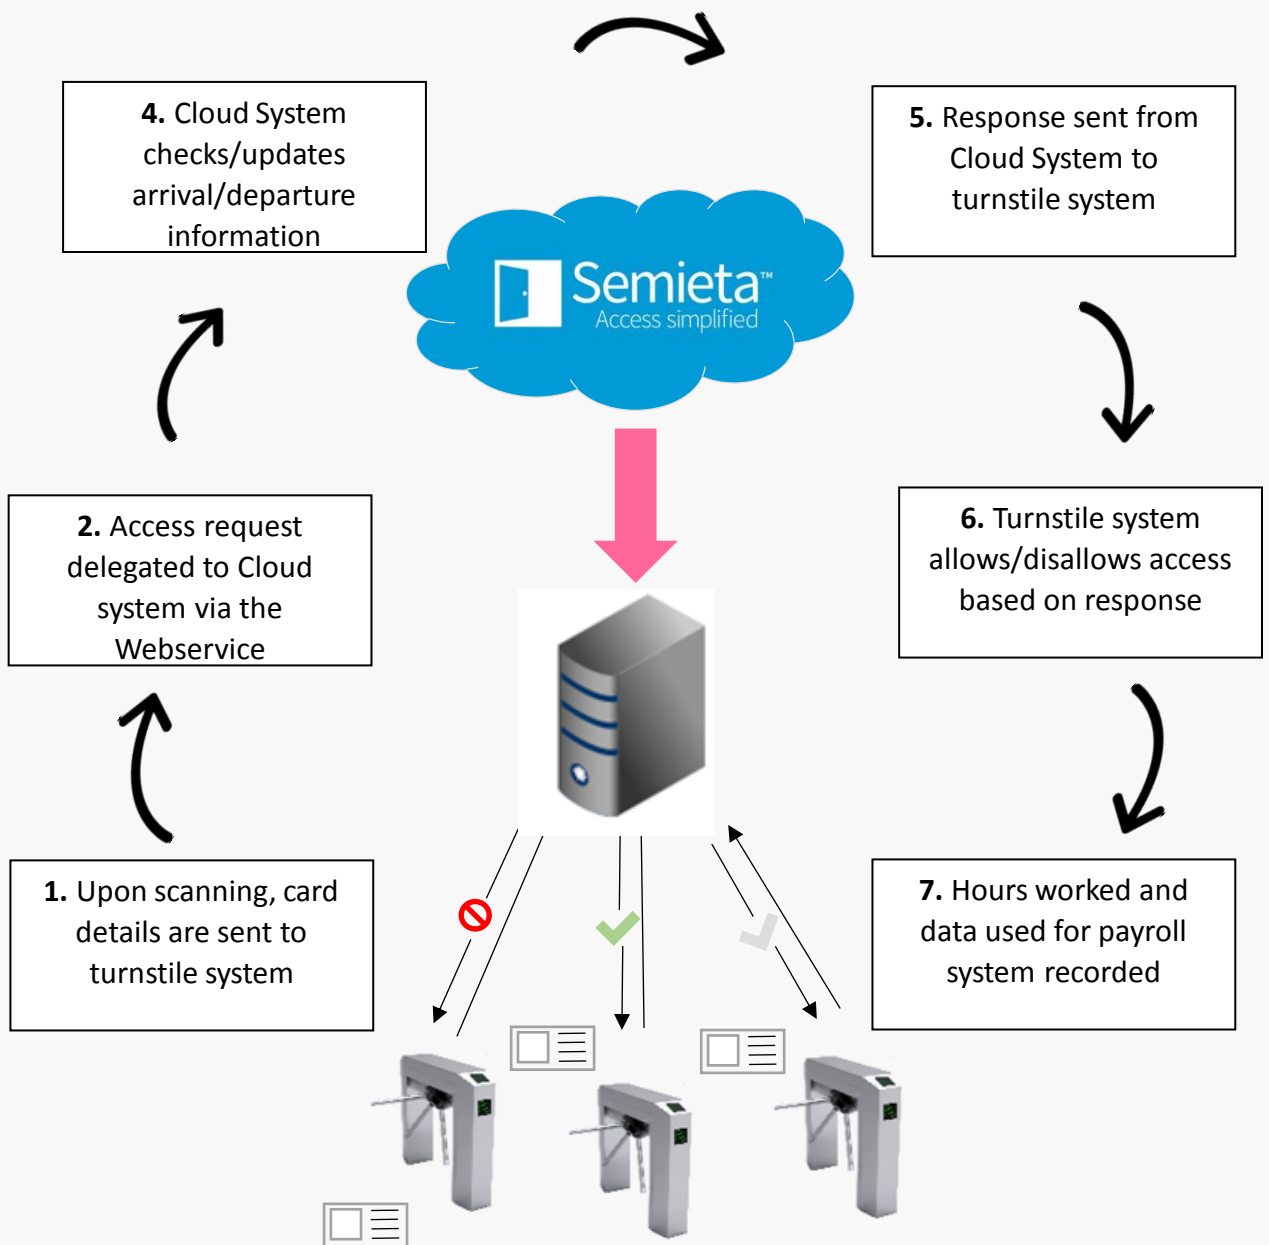

AccessIT Data Ltd is a UK based new-technology developer specialising in visitor management systems and access-control site security, using proprietary software and hardware technology, and working with hand-picked partners to provide full service solutions.

We make managing site security and safety, and the experience of site users and visitors, as easy and as simple as possible...so you can focus on giving the best possible experience to your staff, students, contractors and visitors.
